

Financial  
Connectivity,  
Simplified.

# SYMMETREE

Symmetree by Axletree® is the ultimate enterprise integration solution, seamlessly connecting diverse data formats and optimizing payment flows with secure, any-to-any format & systems integration, advanced transaction reporting, and effortless compliance across all financial networks.

# Why choose Axletree?

## Any-to-any data format translation

Symmetree can receive transactions in any existing format and convert them to any required format, streamlining communication between enterprise applications that may not natively speak the same language.

## Connection to any global rails/protocols

Symmetree supports all the rails of transmission that organizations require, including sFTP, MQ, and APIs.

## Swift API Integration

With Symmetree's capacity to process Swift APIs, organizations can take advantage of the many available Swift API-enabled solutions to enhance their message processing, tracking, and analytics.

## Message validation & enrichment

Symmetree can validate data for compliance with industry standards such as SEPA, EBICS, CBPR+, etc. It can also validate destination requirements and suitably enrich the data from SSI or other sources.

## Comprehensive reporting dashboard

Symmetree's comprehensive search and reporting features enable organizations to view and organize data on their financial activities for ease of visibility, review, and analysis.

## Message Adapters

### ISO 20022

PAIN CAMT PACS

MT

CSV

Other Proprietary Formats

## Security

Multi-factor authentication

4-Eyes process controls

End-to-end encryption

Audit trails

# 99.99% Uptime

(2022-2024 average) for Symmetree

## Client Challenges We Solve

**Disjointed data formats**, across enterprise applications, requiring manual intervention and slowing down transaction processing

Disparate connectivity to global transmission rails such as sFTP, MQ, and APIs, complicating the integration of different systems

Limited integration with Swift APIs, preventing organizations from fully leveraging Swift-enabled solutions for message processing, tracking, and analytics

Inconsistent data validation and enrichment across various standards like SEPA, EBICS, and CBPR+ leading to compliance risks and processing errors

Lack of a unified reporting dashboard making it difficult for organizations to gain visibility into their financial flows

## Realized Benefits for Organizations

Smooth integration of existing back-office applications with any required internal and external system

Seamless processing of all financial messages regardless of format

Enhanced quality and clarity of financial messaging processes

Expertly managed compliance with continually updating global standards

Reduced internal IT footprint

Insight into financial transaction data with customizable reporting

In a world of complex financial messaging formats and data types, Symmetree by Axletree® gives you ***Peace of Mind*** with a solution that effortlessly standardizes your payment flows, integrates your internal systems with your bank and corporate counterparties, and streamlines straight-through processing—boosting efficiency, agility, and control across your payments ecosystem.
